

Position erfolgreich besetzt

Our client is one of the world's leading full-service providers for electronical end to end supply chain management solution, which has itself established on the market as an innovative manufacturer for, inter alia, medical devices. For further strategic and operative organization and site management in Switzerland we are seeking an entrepreneurial personality (m/f) for the position of

Managing Director (m/f)

Injection Molding & Automation Operations Management

Profile

As a General Manager you will plan, direct and control all activities within the company. You have the responsibility for management and profit and loss. You coordinate the operating activities, so that approved products are manufactured on schedule, within quality standards and cost objectives. Additional duties involve management oversight of the estimation of manufacturing capacity, production and materials control. In addition you will be responsible for the maintenance, product and tool design, industrial engineering and other manufacturing support activities.

You will be involved in the strategic planning and operative business development. One of your responsibilities will be the business assessment of existing and potential new markets. In addition you will be accountable for the development and maintenance of relationships with stakeholders, key customers and industry experts to develop a strong pulse on the competitive landscape of the market.

Qualifications

You possess a Bachelor's degree in Engineering, MBA preferred. More than 15 years of industry experience with at least 10 years of experience in Plastic Injection Molding & Automation Operations Management at Executive Level are required. Beyond that you should have a minimum of five years medical plastics injection molding operations management experience at Director Level. You have gained managerial experience in both international and local/regional companies.

As an ideal candidate you are familiar and have a strong know-how of the main technologies including material engineering, tooling, precision plastic molding, secondary operations, assembly and automation. You have proven experience in the field of regulatory requirements (such as ISO-13485, FDA-certifications). NPI-experience with new customer programs from concept to successful manufacturing ramp and launch is required as well.

You convince by being able to lead large teams, to show interpersonal qualities and to consider yourself a mentor. In this role you will act as a role model, advisor, companion, network planner and innovator.

You will impress with your entrepreneurship, strong innovation skills, strategic thinking and decision-making skills. The ability to operate well in a rapidly changing, often high-stress global environment will complete your profile. Business fluent English skills are essential - any further language will be of benefit.

If you like to enhance your responsibility in a growth-oriented company, please submit your complete application indicating the key number (ID)WP 1330 – preferably by e-mail to info@wpmb.de or by regular mail to the following address: Walter & Partner Management Consulting, Friedrichsplatz 1, 68165 Mannheim, Germany, attn. Mr. Jürgen Walter. For further information, please contact Mr. Jürgen Walter Tel. No.: 0049 (0) 621-300 99 400. We look forward to your detailed application!
